SUPPLIER QUALITY PROGRAM INQUIRY

April 3, 2008

Dear Quality Specialist:

Re: Quality Assurance ISO 9000 or other relevant Aerospace Quality Systems

This is a routine inquiry into applicable quality standards pursuant to ISO 9000 or FAA AC 00 56 for the supply of Aerospace products and components.

These standards are required by companies that have received certification in applicable Quality Programs and require that only approved sources be used in the procurement of parts and equipment for Aerospace materials. Our role in the supply chain implies that we substantiate this information for end-users who request it.

We highly respect these quality improvement initiatives and have chosen to pursue ASA 100 which conforms to FAA AC 00 56 because of its focus on distributors. We also have familiarity with TQM, Continuous Quality Improvement and Six Sigma through business relationships and associations.

A brief questionnaire has been enclosed for your completion. We would appreciate return of the survey along with any relevant documentation that elaborates on your Quality Program.

If you are not currently approved or certified to any applicable Quality Programs, please indicate your status in this area.

AEROS appreciates your attention.

Sincerely,

A handwritten signature in black ink, appearing to read "Dan Haugh", with a long, sweeping horizontal line extending to the right.

Dan Haugh
President
AEROS Inc.

Please return the questionnaire within 15 Business Days from the date of receipt.

Products Supplied	Email

1. Are you either implementing or certified on a Quality Program? (Please elaborate)
2. Does your program offer certified statements disclosing any conditions of extreme stress, heat or environmental exposure that parts or equipment may or may not have been subjected to?
3. Are goods or materials received by you inspected on your premises?
4. Is there a system in place for recall control which ensures that parts shipped can be traced and recalled?
5. Do you issue certificates of conformance with your products?
6. Does the record system require retention for at least 7 years from the date of shipment to the customer?
7. Does the quality system require shipments in ATA-300 containers or equivalent as appropriate for the unit being shipped, or as specified by the customer?
